Profile

Computer Engineering graduate with a strong passion for artificial intelligence, machine learning, and data science. With hands-on experience in building predictive models, fraud detection systems, and large-scale data processing in the banking and telecommunications sectors, I am eager to deepen my expertise in AI through the AIMS Master's in Artificial Intelligence programme, with the goal of contributing to applied research and developing innovative solutions for the African continent.

Technical Skills

AI & ML: Supervised/Unsupervised Learning, Deep Learning (CNN, RNN, Transformers), NLP, Computer Vision, Reinforcement Learning

Languages: Python, Java, C#, SQL, R, JavaScript

ML Frameworks: TensorFlow, Keras, PyTorch, Scikit-learn, XGBoost, Pandas, NumPy, Matplotlib

Data Engineering: Apache Spark, Hadoop, Airflow, ETL, Data Pipelines

Development: Django, FastAPI, REST APIs, Microservices, .NET

Databases: PostgreSQL, MongoDB, SQL Server, PLSQL, T-SQL

Tools & DevOps: Docker, Git, Linux, Jupyter, Google Colab

Methods: SDLC, Agile, ML Experimentation, Model Evaluation, Scientific Documentation

Professional Experience

UBA Chad

Intern – Digital Department

N'Djamena, Chad

Jul. 2025 – Present

- Provided technical and functional support for high-availability digital platforms.
- Analysed and resolved incidents related to online services (transactions, client access, synchronisation).
- Monitored the stability and performance of the **UBA Digital Bank** application.
- Collaborated with network and security teams to ensure service continuity.
- Produced technical documentation and proposed improvement measures.

Sky Telecom Technology SARL

IT Consultant

N'Djamena, Chad

Jan. 2025 – Aug. 2025

- Participated in IT projects within a telecommunications environment.
- Integrated, deployed, and supported application solutions for business clients.
- Provided technical assistance, incident diagnosis, and end-user support.
- Coordinated with technical teams to ensure service quality and availability.

STB Bank

Data Scientist – Fraud Detection

Tunis, Tunisia

Feb. 2024 – Jun. 2024

- Designed and developed a fraud detection engine using machine learning algorithms (Random Forest, XGBoost, Neural Networks).
- Performed exploratory data analysis on transactional data and engineered features to improve model performance.
- Built data processing pipelines and REST APIs for real-time integration.
- Deployed containerised services (Docker) focused on performance and reliability.

ONPF

Software Engineering Intern

Tunis, Tunisia

Nov. 2022 – Jan. 2023

- Developed a land records management platform with automated processing modules.

Education

École Centrale Polytechnique

Engineering Degree in Computer Science

Tunis, Tunisia

2021 – 2024

École Centrale Polytechnique

Preparatory Classes MPSI/MP (Mathematics & Physics)

Tunis, Tunisia

2019 – 2021

Certifications & Online Courses

2025: Deep Learning Specialization – DeepLearning.AI (Coursera)

2025: MITx 6.86x: Machine Learning with Python – from Linear Models to Deep Learning (edX / MIT)

2024: Machine Learning Specialization – Stanford / DeepLearning.AI (Coursera)

2024: IBM Big Data Engineer Certificate

Academic & Personal Projects

Fraud Detection: Built a fraudulent transaction detection system using ensemble learning and deep learning techniques on real-world banking data.

Neural Machine Translation: Developed a neural machine translation (NMT) system from French to Chadian Arabic, contributing to the preservation and digital empowerment of a low-resource language.

NLP & Sentiment Analysis: Implemented natural language processing models for sentiment analysis on French and English textual data.

Computer Vision: Experimented with CNN architectures (ResNet, VGG) for image classification and object detection.

Languages

French: Bilingual (TCF C1)

English: Professional working proficiency

Arabic: Bilingual

Soft Skills

Research: Intellectual curiosity, scientific awareness, and critical thinking

Collaboration: Ability to work in multidisciplinary teams and communicate with both technical and business stakeholders

Rigour: Scientific methodology, clear documentation, and reproducibility of results

Autonomy: Self-driven, continuous learning, and commitment to improvement
